

Quick Test Density

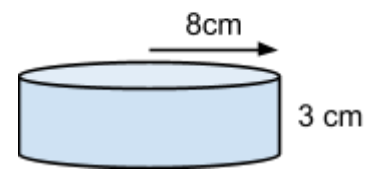

1. The diagram shows a solid cuboid made of wood. The wood has a density of 0.56 grams per cm cubed. Calculate the mass of the cuboid.

2. The density of gold is 19.4 grams per cm cubed. A gold ingot is produced in the shape of a cuboid. The cuboid has length 20cm, width 8cm, height 2cm. Work out the mass of the gold ingot. Give your answer in kilograms

3. A solid cylinder is made of wood.
It has a radius of 8cm and a height of 3cm
The cylinder has a mass of 392 grams
Work out the density of the wood

Give your answer correct to 2 significant figures.

4. Seawater has a density of 1.02g/cm^3 .
255g of seawater mixes with some freshwater, to form coastal water.
The coastal water has a mass of 304.5g, and a density of 1.015g/cm^3 .
Find the density of the freshwater.
