

## QT Tough Questions - Proving Cosine

The diagram shows a hexagon ABCDEF.

ABEF and CBED are congruent parallelograms where  $AB = BC = x$  cm.

P is the point on AF and Q is the point on CD such that  $BP = BQ = 10$  cm.

Given that angle  $ABC = 30^\circ$ , prove that

$$\cos \text{PBQ} = 1 - \frac{(2 - \sqrt{3})x^2}{200}$$
