Mathematics Paper 3 (Calculator) Higher Tier									
You must have: Ruler graduated in centimetres and millimetres, protractor, pair of compasses, pen, HB pencil, eraser, calculator. Tracing paper may be used.								Total Marks	

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- You must **show all your working**.
- Diagrams are **NOT** accurately drawn, unless otherwise indicated.
- **Calculators may be used.**
- If your calculator does not have a π button, take the value of π to be 3.142 unless the question instructs otherwise.

Information

- The total mark for this paper is 80
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

5 Lara is a skier.

She completed a ski race in 1 minute 54 seconds.

The race was 475 m in length.

Lara assumes that her average speed is the same for each race. (m/s)

(a) Using this assumption, work out how long Lara should take to complete a 700 m race.

Give your answer in minutes and seconds.

$$\text{Speed} = \frac{\text{Dist}}{\text{Time}} = \frac{475}{60 + 54} = \frac{475}{114} = 4.16 \text{ m/s}$$

$$\text{Speed} = \frac{\text{Dist}}{\text{Time}}$$

$$4.16 = \frac{700}{\text{Time}}$$

$$\text{Time} = \frac{700}{4.16}$$

$$= 168 \text{ seconds}$$

$$= 2 \text{ min } 48 \text{ sec}$$

$$2 \text{ minutes } 48 \text{ seconds}$$

(3)

Lara's average speed actually increases the further she goes.

(b) How does this affect your answer to part (a)?

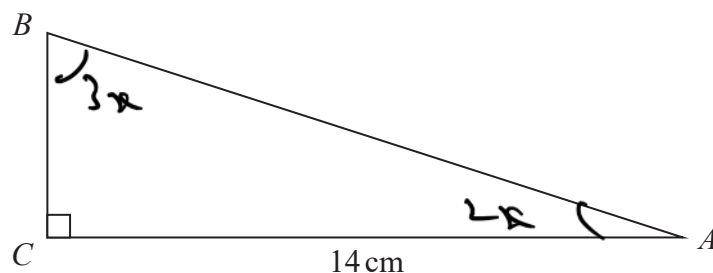

Her time will be quicker
